MISR

The 46-degree forward-pointing camera of MISR captured this unique view of the tsunami 30-40 kilometers off the southwest Sri Lankan coast. These data will aid in the study tsunami dynamics.

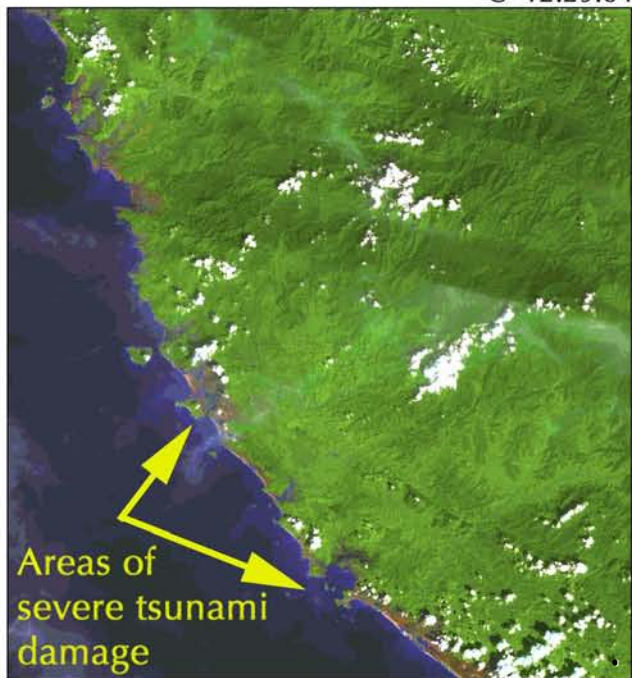

This EO-1 image of the city of Phuket, Thailand was taken five days after the tsunami. EO-1 and MODIS data were used by Naval ships for navigation aid in the early stages of the relief effort.

Landsat

Using regional tsunami-impact maps created from Landsat data, Indonesian officials were better able to direct relief efforts in the Aceh region of Sumatra.

This MODIS image shows the massive extent of the tsunami damage along the northwestern coast of Sumatra.
